Science

The senses -Touch

"Which body part do we use to touch?" Encourage your child to name all the body parts that we use to touch (fingers, cheeks, toes, elbows, etc.). Explain to them skin is the largest sense organ we have.

Brainstorm things they can touch and discuss how they feel (hard, soft, cold, bumpy, etc.)

- 1) Go through the Touch powerpoint.
- 2) Make a poster about touch.
 - Draw around your hand
 - Glue and label a different texture on each finger using different materials.
